easily add your enterprise, add employees, add products, and track your inventories movement from purchase through order fulfillment to your customer and run detailed reports.

- <https://inventoryplus.herokuapp.com/>

- YouFoods: Collaboration with two fellow Bootcamp students. Food shelves can register their locations and post and delete requests for various items. These food shelves appear on a map on the landing page so that donors can find locations to drop off specific items. The results on the map can also be filtered by item. - <https://pantry-find.herokuapp.com/>
- Movie Generator: Collaboration with fellow Bootcamp students. App allows user to view details on random movies and save them to a sortable and filterable watch queue. HTML, CSS, Bulma, JavaScript, jQuery used along with two APIs. I worked primarily on the logic and APIs. - <https://amplifyrebel.github.io/movie-generator/>
- JabberBlocky: Blog site with login-registration and CRUD operations for posts and comments. - <https://jabberblocky.herokuapp.com/>
- Coding Quiz: Timed quiz for coders. HTML, CSS, and vanilla JavaScript employed. - <https://joechristianson.github.io/CodingQuiz/>
